## Preface

I rarely using the name Semi Slav to describe this opening, I prefer to call it the Meran due to the origin of the line. In my opinion, the best way for Black to play is via ...e6 move orders. For instance, 1.d4 ♘f6 2.c4 e6 3.♗f3 d5 4.♘c3 c6 is a really good move order to reach this system and it is a good repertoire as well. Many players, including myself, used to use the Slav move order 1.d4 d5 .2.c4 c6 3.♗f3 ♘f6 4.♘c3 e6. In my opinion the Meran has little to do with the dynamics of Slav positions.

The Meran is a very sharp opening which resembles the open Sicilian dynamics, but it also has a level of solidity due to having a central pawn on d5. In this book I did not analyze the Botvinnik Variation as I have previously published various ideas in several magazines on that system. In this volume I decided to give a modern approach to the 5.♙g5 move order.

Due to some interesting ideas that White players have recently been using you will find a section devoted to some improvements in the Catalan.

Throughout chess history top players have employed the Meran in their repertoires. In this century alone former World Champions Kramnik and Anand have both used the Meran.

Position after: 5... ♗bd7

We are entering the main line of the Meran or Semi-Slav as it is also called. It is a highly popular and reliable system that has been popular for decades. The positions are like the open Sicilian in that they are sharp and complex. You may wonder how that can be as the actual positions are completely different. The key is that in both defenses Black is seeking harmonious piece play and many times abandons the safety of his king in exchange for rapid counterplay! Further, we have a way to exchange our d5 pawn for the c4 pawn at some point allowing us to attack the center. This means we will have sharp play!

**6. ♖d3**

This is White's main idea. While Black can exchange on c4 with gain of tempo White counts on the fact that his

development is still faster, and he will have better play. The less popular 6. ♖c2 system will be examined later.

**6... dxc4 7. ♖xc4 b5**

That a main point here is that Black is ready to play ... ♖b7 with ...c5 coming to start creating pressure against the center.

**8. ♖b3**

Position after: 8. ♖b3

The other popular move is 8. ♖e2 which we will look at later.

**8... b4**

Best in my opinion.

**9. ♗e2**

From my own practice this is the critical move although another move is also possible.

12...  $\text{Q}xf4$

A good choice, and the safest.

13. exf4 c5

The positional response. White is not

looking for a quick e4, but Black cannot

ideas here.

8... b4

I am quite fond of this early queenside  
play which stops White's early e4 ex-  
pansion while introducing some compli-  
cations. Now White must try to stop  
Black's ...c5.

Position after: 8. Qd3

**8... Qb7**

This has long been established as the best move order for Black and I will elaborate on that later. Normally Black aims for a quick ...b4 but in the last decade Black has found other moves which we will examine.

**9. a3**

Position after: 9. a3

This is a very important line, and we will see that it transposes into a specific variation of the 6. Qc2 system which we will analyze separately. In the system we are currently reviewing we will see that the 6. Qd3 and 6. Qc2 lines actually

merge. I decided to analyze this line here as it is probably the best way for Black to investigate the specifics of the 6. Qc2 lines before looking at the 6. Qd3 ideas.

**9... Qd6**

This is very popular and preferred to the older 9...b4. At some point the white queen will land on c2 although it is not forced it is the most desirable square for her majesty.

An older idea that was played in the past starts with 9...b4. However, after 10. Qe4 Qxe4 11. Qxe4 bxa3 12. 0-0 Qd6 now White has three possible options that create some problems for Black: 13. Qd2; 13.b3; or 13.b4.

**10. 0-0 0-0**

Position after: 10... 0-0

We have reached the main branching off point. White has several ideas here including Qc2 which is the main option.

We are in the 6. ♚c2 line but this line with 9.a3 actually belongs to both systems. I decided to review it here as this particular move order is very important for repertoires of those playing Black.

**11... ♖c8**

This is a more modern approach and also critical as Black looks to play ...c5 quickly.

The variation with 11... a5 was a critical line played by Anand and Shirov; but it has been replaced with the 13... ♖c8 line.
